

Webinar Q&A

The State of Palliative Care in Hospitals: Insights from the COVID Pandemic – Friday June 5, 2020 @ 4 pm ET

Question	CPC Exchange	
<p>Alyssa 04:31 PM</p> <p>I am interested to know what resources or tools are available for those patients who have visual/hearing impairments and are in isolation. How do we keep them socialized to reduce loneliness and/or depression? Facetime sessions or tv programs may not be useful if there are visual/hearing impairments.</p>	<p>There were several questions submitted during the webinar that the panellists were unable to answer due to the time restrictions of the webinar.</p> <p>Please continue the discussion by joining the Canadian Palliative Care Exchange and posting your question as a discussion topic.</p>	
<p>Catherine 04:46 PM</p> <p>Some of our patients are waiting too long to get care because they are afraid of coming to the hospital and their primary providers are also working at less capacity. What do you think will need to shift before they feel more comfortable seeking care again?</p>	<p>There is no cost to participate.</p> <p>Join now to share and learn alongside your colleagues from across Canada: www.cpcexchange.ca</p>	
<p>Sue 04:50 PM</p> <p>Comment: as an end of life doula I'm struggling with the technical challenges some older persons might have – using virtual means.</p>		
Question	Answer	CPC Exchange
<p>Catherine 04:22 PM</p> <p>I am an advanced practice Palliative Care nurse redeployed from hospital to community during the pandemic. The number of home deaths has tripled (per month) in our city without more support.</p>	<p>This seems to be an emerging experience across the country in many regions. We are hoping to address this, specifically resources for home/community care, in the upcoming webinar.</p>	<p>If you'd like to continue this conversation head to the Canadian Palliative Care Exchange and create a discussion topic or contribute to a conversation already taking place.</p> <p>There is no cost to participate.</p>
